1 RECRUITMENT & SCREENING

Recruit Republican Sample via Lucid

Total enrolled: $N = 1{,}848$ • Study 1: $n = 1{,}215$ • Study 2: $n = 633$

Screeners & Exclusions:

Failed captcha: $n = 129$ Low-quality screener: $n = 1{,}161$ Non-Republican: $n = 475$

Failed attention: $n = 360$ No conspiracy stated: $n = 664$ Speeders ($\leq$ 10m) retained: $n = 80$

2 BASELINE MEASURES

Core Values, Demographics & Covariates

Age, race, gender, religiosity, affective polarization, AI knowledge/use

Pre-Intervention Election Denialism Outcomes

2020 Election Denialism (primary outcome); additional denialism items

Election Conspiracy Solicitation

Specific claim articulated; **Claim Certainty** rated from 0% to 100%

3 RANDOMIZATION TO CONVERSATION

- **Control** — Cats vs. Dogs (Study 2)
- **Adversarial Statement** (Studies 1 & 2)
- **Values-Tailored** (Study 1)
- **Belief-Tailored** (Studies 1 & 2)

4 POST-INTERVENTION & FOLLOW-UP

Post-Intervention Denialism Outcomes

Re-assessment of 2020 Election Denialism and specific Claim Certainty

Debriefing & Follow-Up Measures

Affective polarization, AI attitudes, manipulation checks, institutional trust;

all participants fully debriefed on AI capabilities and limits

Sample Conversation | Belief-Tailored

Belief change (post − pre): ΔClaim Certainty: −**59** pts · Δ2020: −**39** pts

ROUND 1 | Initial Claim & Rebuttal

PARTICIPANT

Because there are so many people who support Trump and he should have won last year. It was found out later that some of the votes were messed with… mail[-in votes] were tampered with and some people had passed away before ballots were sent off.

GPT

I understand why you feel this way… Regarding mail-in ballots and deceased voters: mail-in voting has been secure for decades, verified via signature matching and barcode tracking. Audits in key states and over 60 court dismissals confirmed anomalies were exceedingly rare and caught by routine checks, with no evidence of fraud altering the outcome.

ROUND 2 | Electoral Safeguards

PARTICIPANT

How are they going to make sure that the votes are fair this year?

GPT

Elections use multiple overlapping safeguards: voter registration verification against state databases, barcoded mail ballots with signature checks, strict chain-of-custody protocols, post-election audits, and bipartisan poll-worker oversight.

ROUND 3 | Mail-In Verification

PARTICIPANT

Are they going to be thoroughly looked at before allowing the mail in votes?

GPT

Yes, mail-in ballots undergo pre-count verification before being opened: identity checks, signature matching against official voter files, a curing process allowing voters to fix errors, secure physical storage, and bipartisan oversight at processing centers.
